Milestone Map:

1) Milestone 1: Raise enough money to quit job so I can work full-time on this endeavor! Right now its hard to put the full force of my work ethic behind this endeavor. I work full-time and I lose momentum when I can't work on this full-time. Its like cutting the flow of water every week for 4 days and I have to rest one or two days to get focused again to work at this again. Its hard to lead two lives. Riding two horses at once is not going to make this a success. I need to be in the game of Christcoin 100% 365 days out of the year 12 to 14 hours a day for years to come. I imagine once things are developed, launched and I have a good support staff. I can take time away. Wooo! Praise be to Jesus Christ!

I've never won a jackpot in my life. I'm asking for 77,777.77. Mostly to bring the humor into the room! Woo!

2) The second step while getting with legal advice and finding a good accountant. (Also finding a good development locale). Is the big money raise. I want to run a rewards based crowdfunding campaign! I imagine the total amount of money we need at a low end to hire on all the people I need to build a working Christian blockchain node network is somewhere in the ballpark of 7 to 10 million. This is a middle estimate, a low estimate? Some similar companies have raised in the ballpark of 60 to 80 million for similar results. I genuinely don't think we need that. I think a lot of that money went to those companies personal coffers.

I don't think I am wrong. I could be, but I also believe greed is a driving force in most man's errands. I may be wrong, but I genuinely may just be a cheap guy who doesn't need frivolous spending until after the product is built and launched.

3) While all this is playing out we will be gathering the Development team. Choosing a development locale. And engaged in the mass

solicitation of many countries regulatory legal bodies to discern how to properly file and what path to chart through each nations individual legal backgrounds if any at all. Once the dev. team, hardware, servers, legal team, marketing, etc etc. Once I am conductor at Orcheastra a great part of our time will be spent learning the instruements harmonizing and drawing up the great plans for the future.

4) Writing the main program and accessory programs. I estimate approx. 5 to 7 million lines of code. The most important job we must fulfill is drawing and getting a working blockchain node network off the ground. This entire process may take 8 to 12 months. Its my current expectation. We may run longer for the express purpose of building a better working program.

5) Launch to 204 Nations. As per part of our governance council. Our governing body needs votes. And I am still on the fence how many and what their roles and responsibilities will exactly be.

However, I want to get representatives of every nation (Christian, Catholic, Orthodox, etc) in the same room for a week. There will be a vetting process. To form a strong bridge between nations. Education, food, 3rd party support, vendors will probably all be here. I have not yet decided which state or nation is best suited for this conference.

I may make it an annual event. I am perfectly fine if people sleep on the floor of the conference etc to save money. I've slept in some strange places. Its good for man to stretch himself as long as he doesn't hurt himself.

6) Post-Launch: I am a accumulated notes kind of guy. Part of the reason why the industry is so prone to hacks and attacks is simple. Many people have yet to properly standardize their processes in making new developments in industry. Many of the hacks can be avoided with better communication. We need to better standardize our onboarding practices and assume and test to assume best practices in industry.

7) "2nd Coming or Ressurection" Assuming we grow old with this endeavor I imagine there may be the need for a major overhaul in the long term future 15 to 25 years from Launch. Hopefully I am still alive by then!
